

ReDist

Surplus redistribution with trust, evidence, and impact.

[redistribut.com](https://www.redistribut.com)

A controlled redistribution platform for verified organizations

ReDist helps suppliers list usable surplus, recipients request resources, and both parties complete

Core position

UAE-first organization-to-organization redistribution with controlled workflows, founder-guided onboarding, and verification boundaries.

Pilot status

Built for the first guided UAE workflow: one supplier, one recipient, one handover, one certificate, one feedback cycle.

Proof model

Impact claims are supported only by completed transfers, certificate evidence, and approved participant feedback.

01

Supplier workflow

01

Recipient workflow

01

Evidence cycle

Useful surplus is hard to move with confidence

Redistribution often depends on scattered calls, informal contacts, spreadsheets, and

Operational friction

- Unknown recipient suitability
- Incomplete resource and request details
- Unclear handover responsibility
- Missing completion evidence
- ESG teams need proof, not screenshots

The result

Usable surplus can stay idle, be discarded, or move without enough trust and evidence for enterprise teams.

The UAE has the right operating sectors for a guided pilot

ReDist starts with controlled workflows before wider scale.

Hotels and hospitality

Commonly has either surplus resources, operational needs, or strong distribution networks.

Warehouses and logistics

Commonly has either surplus resources, operational needs, or strong distribution networks.

Restaurants and food service

Commonly has either surplus resources, operational needs, or strong distribution networks.

NGOs and schools

Commonly has either surplus resources, operational needs, or strong distribution networks.

Corporate ESG teams

Need practical, defensible evidence for reporting.

A redistribution workflow, not a consumer marketplace

ReDist organizes how verified organizations list, request, approve, hand over, verify, and evidence surplus movement.

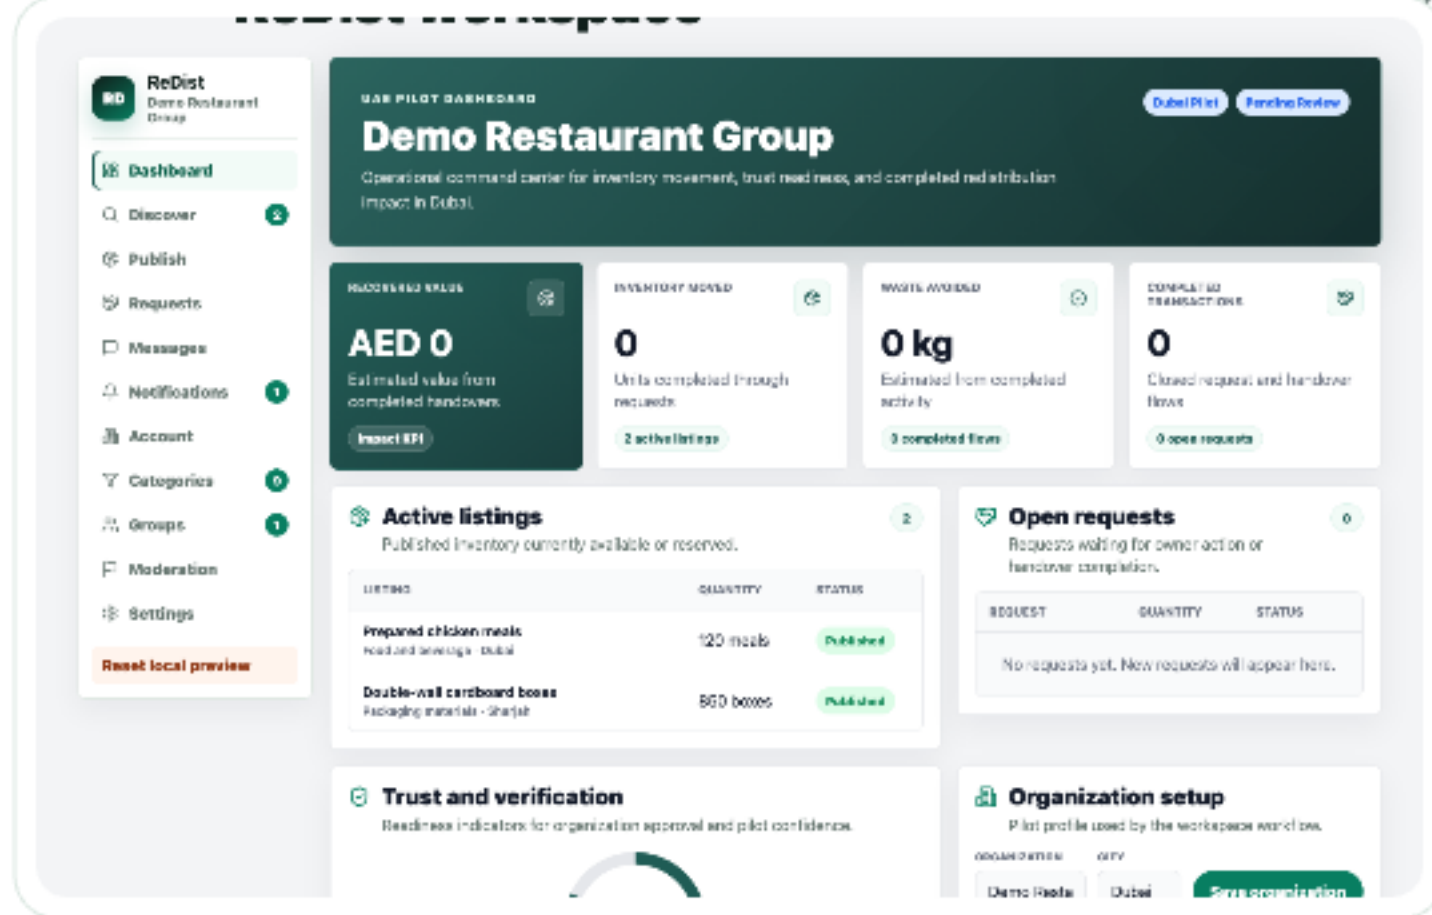

Operating principle

Every step should answer: who owns the action, what information is needed, and what evidence remains after completion.

From surplus listing to verified handover

The workspace is designed around daily operational actions for suppliers, recipients, and

Workflow steps

- Supplier lists approved surplus
- Recipient discovers resources
- Recipient submits request
- Supplier approves or clarifies
- Handover is coordinated
- Completion is verified
- Certificate and impact evidence are reviewed

Trust is built through workflow boundaries

ReDist separates operational evidence from legal or audited ESG guarantees.

Founder-guided pilot access

Designed to reduce ambiguity before resources move.

Organization-level participation

Designed to reduce ambiguity before resources move.

Supplier approval before release

Designed to reduce ambiguity before resources move.

Verification where required

Designed to reduce ambiguity before resources move.

Handover confirmation

Designed to reduce ambiguity before resources move.

Certificate-backed evidence

Designed to reduce ambiguity before resources move.

Boundary note

Certificates are operational evidence, not legal guarantees or audited ESG certificates.

Impact should be credible, traceable, and conservative

ReDist groups results by what the organization can reasonably evidence.

Evidence

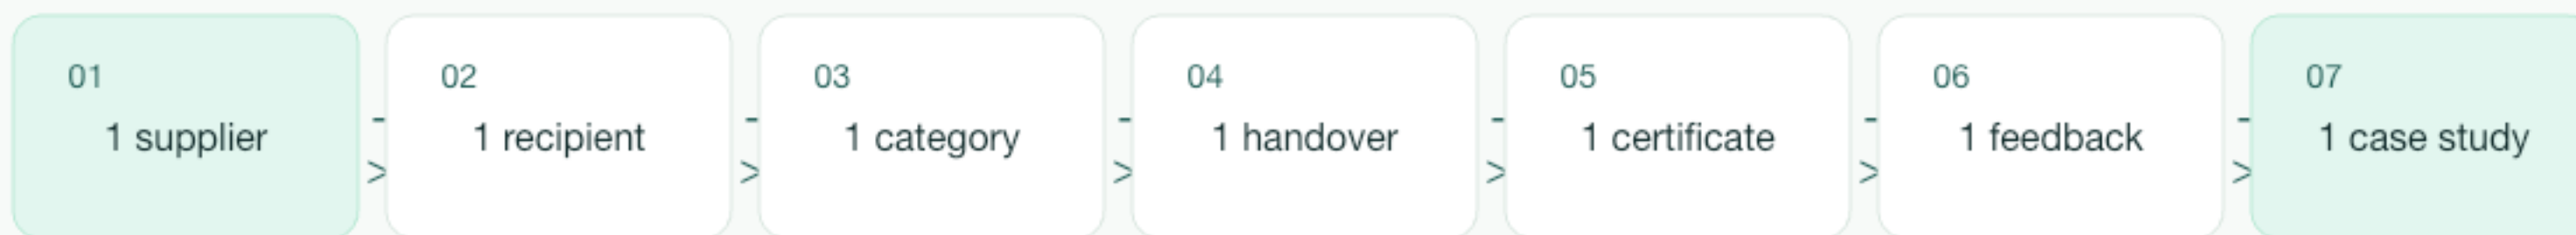

Evidence rule

No public impact claims until real transfers are completed, verified, and approved for publication.

Wave 1 is intentionally small

The goal is market evidence, not scale theater.

Pilot goal

Generate first real market evidence through a guided workflow that can be repeated with confidence.

Each participant gets a practical operating reason to join

The pilot is framed around usefulness, control, and evidence.

Suppliers

- Make surplus useful
- Keep approval control
- Preserve evidence

Recipients

- Discover resources
- Track requests
- Receive evidence

Partners

- Support circular economy activity
- Connect networks
- Strengthen evidence standards

Partnerships can accelerate trust and access

ReDist can work with organizations that supply, receive, introduce, sponsor, or validate circular economy workflows

Supplier network partner

Potential role in building a trusted UAE redistribution ecosystem.

Recipient network partner

Potential role in building a trusted UAE redistribution ecosystem.

ESG reporting collaborator

Potential role in building a trusted UAE redistribution ecosystem.

Ecosystem introducer

Potential role in building a trusted UAE redistribution ecosystem.

Pilot sponsor

Potential role in building a trusted UAE redistribution ecosystem.

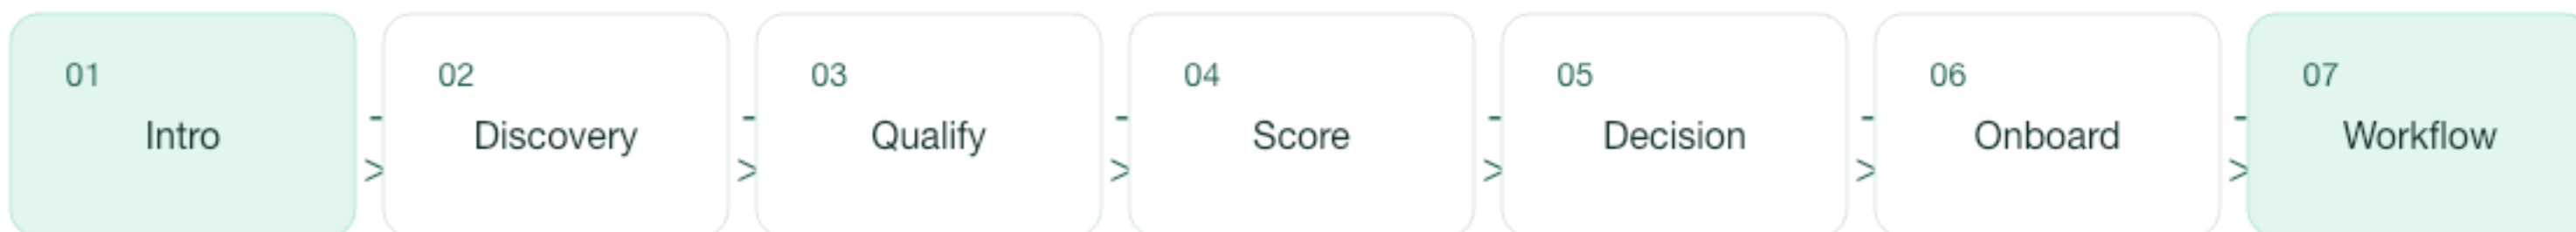

Category partner

Potential role in building a trusted UAE redistribution ecosystem.

From first conversation to first workflow

The meeting path keeps qualification and next actions clear.

Call to action

Confirm role, contact, first category, and onboarding readiness.

A simple qualification decision

The next step is clear only when the first safe category, owner, and workflow are known.

Next-step checklist

- Confirm supplier, recipient, partner, or ESG collaborator role
- Identify first safe category or need
- Assign decision maker and coordinator
- Complete qualification checklist
- Schedule onboarding if qualified

Questions executives usually ask

Short answers for first meetings.

Is ReDist a marketplace?

No. It is a controlled redistribution workflow for organizations.

Is it public self-serve?

Not for the first pilot. Wave 1 is founder-guided.

Who owns quality and safety?

The participating organizations remain responsible for suitability and safe handover.

Is the certificate audited ESG proof?

No. It is operational evidence unless separately reviewed.

What is the first pilot goal?

Complete Transfer #0001 and create defensible evidence.
